NARRATIVE REPORT

☐ INTERIM☒ FINAL

The rewind unit was received in-house at the end of October 1965. On arrival all four castor support brackets were found to be damaged, probably due to the weight of the unit and its movement in the transport vehicle. The contractor subsequently manufactured and installed heavy duty supports.

A further modification, carried out by the contractor, was to increase the length of the sliding support for the supply spool so that, if preferred, only one 70 mm or 5 inch spool need be loaded.

The unit functions well with single spools, but there is some difficulty in rewinding from two 5 inch or three 70 mm spools containing film of unequal lengths. It is unlikely that this problem could be overcome with the machine in its present form and it is considered more practical to continue to use it in the single spool mode.

An evaluation report is awaited from I CB.

  
Development Branch, P&DS

25X1A

This report certifies that all deliverable items under the contract have been received and accepted. The contractor's performance was satisfactory.

NARRATIVE REPORT☐ INTERIM☐ FINAL

Accompanied by [REDACTED] (PSD/ICB) ~~reaccepted~~ 25X1A acceptance checks were carried out on the unit on 15 Oct. Machine was operated with 200 ft. of 9 1/2" film and functioned properly at all speed settings. Adaptors were provided to allow three 70 mm spools or two 5" spools to be fitted at supply end, but lack of necessary film precluded operation in these modes. Modifications to the 5" spool adaptor were suggested to the contractor and accepted. Re-positioning of the power inlet switch box was also agreed to.

It was observed by [REDACTED] and self that the 25X1A safety cover was heavy and very awkward to operate. However, it does meet contractual specifications and its use is a matter of operator preference. The unit could be operated with the cover in the open position and the micro-switch taped over and in this mode should be safe in the lower speed range. The unit was accepted (for delivery on 18 Oct) subject to further testing inhouse with 70 mm and 5" film.

## NARRATIVE REPORT

☒ INTERIM☐ FINAL

A visit was made on 12 Oct 65 to deliver 400 ft. film leader to enable contractor to carry out operating tests of unit. Assembly of the unit had progressed and it was noticed that positioning of the tailstock of the delivery unit was incorrect, thereby preventing secure clamping of a 9 1/2" spool. Contractor promised to rectify this.

NARRATIVE REPORT

☒ INTERIM☐ FINAL

An inspection visit was made on 8 Oct. Assembly of parts was about 25% complete and is expected to be finished by 15 Oct. The clear plastic safety cover was fixed to the unit, but it was immediately apparent that its heavy weight and non-rigidity would be objectionable in constant use. The contractor agreed to modify the cover so that only one or two sections of it need be ~~fixed~~<sup>opened</sup> to load and unload the machine.

Contractor asked for a quantity of 9 1/2" film to enable running tests to be made.

25X1A

An inspection visit was made on 30 July 1965 to review the progress of the contract and to acquaint the new monitor with the effort. A slight change has been made in that the unit will have a film speed range from 1 F.P.S. to 16.67 F.P.S.; continuously variable.

The clear plastic safety cover will be hinged at the top rear corner and will tilt back 90°.

Manufacturing drawings of the unit were nearly completed and fabrication will begin shortly.
